What is an Actuary?

Actuaries put price tags on risks. They calculate the costs of uncertain future events that range from tornadoes and hurricanes to changes in life expectancy. Their work is the backbone not only of the insurance and financial security industries, but of government programs like Social Security and Medicare.

"Actuary" was recently included as one of the Best Careers of 2007 in US News and World Report. The job "actuary" has also been rated the second best job in the United States by the Jobs Rated Almanac (Sixth Edition, 2002). The popular reference book lists the actuarial profession above other highly regarded careers such as accountant or attorney. Only "biologist" rated higher." -- beanactuary.com

Become a Member As a UCLA student, the best way for you to learn about the Actuarial profession is to be involved with our organization here at UCLA. Each quarter, we hold various events such as: The Actuarial Career Fair, Alumni Talk, Informational Sessions, Resume Workshops, and Exam-P Seminars where our primary focus is for you to network and become more familiar with the field.

As we are consistently working closely with over 17 major companies, members will be added to our newly created database and mailing list for constant updates and information regarding internships, full-time jobs, events and more. We would love to get to know you more and share as much as we can about the Actuarial Profession.

We look forward to meeting you soon!
