

Homework 7 Problem 2 Solution

Konstantin Miagkov

December 3, 2017

Problem 1.

Suppose the rectangle has dimensions n, m . Then its area is nm . Since both n and m are integers, they are positive divisors of 31. But 31 is prime, so one of n, m must be 1 and the other 31. Then the perimeter is $2n + 2m = 64$.
