HOMEWORK 1

Exercise 1. Negate the following sentences:

- If you want to live a happy life, then tie it to a goal, not to people or things.
- If that plane leaves and you are not on it, then you will regret it.
- For everyone of us there is someone to make us unhappy.

Exercise 2. Prove the following statement by induction:

$$1+3+5+\cdots+(2n-1)=n^2$$
 for all $n \ge 1$.

Exercise 3. Prove that the sum of the cubes of any three consecutive natural numbers is divisible by 9.

Exercise 4. Show that the expression $n^5 - n$ is divisible by 30 for all $n \ge 1$.

Exercise 5. Compute the following sum and then use mathematical induction to prove that your formula holds for all $n \in \mathbb{N}$:

$$\frac{1^2}{1 \cdot 3} + \frac{2^2}{3 \cdot 5} + \ldots + \frac{n^2}{(2n-1)(2n+1)}$$

Exercise 6. Arguing by contradiction, prove there is no rational number whose square is 6.

Exercise 7. Let X and Y be statements. If we know that X implies Y, which one of the following can we conclude?

- a) X cannot be false.
- b) X is true, and Y is also true.
- c) If Y is false, then X is false.
- d) Y cannot be false.
- e) If X is false, then Y is false.
- f) If Y is true, then X is true.
- g) At least one of X and Y is true.

Exercise 8. Let X and Y be statements. If we want to DISPROVE the claim that "At least one of X and Y are true", which one of the following do we need to show?

- a) At least one of X and Y are false.
- b) X and Y are both false.
- c) Exactly one of X and Y are false.
- d) Y is false.
- e) X does not imply Y, and Y does not imply X.
- f) X is true if and only if Y is false.
- q) X is false.

Exercise 9. Let P(x) be a property about some object x of type X. If we want to DISPROVE the claim that "P(x) is true for all x of type X", which one of the following do we have to do?

- a) Show that for every x in X, P(x) is false.
- b) Show that for every x in X, there is a y not equal to x for which P(y) is true.

- c) Show that P(x) being true does not necessarily imply that x is of type X.
- d) Show that there are no objects x of type X.
- e) Show that there exists an x of type X for which P(x) is false.
- f) Show that there exists an x which is not of type X, but for which P(x) is still true.
- g) Assume there exists an x of type X for which P(x) is true, and derive a contradiction.

Exercise 10. Let X,Y,Z be statements. Suppose we know that "X is true implies Y is true", and "X is false implies Z is true". If we know that Z is false, then which one of the following can we conclude?

- a) X is false.
- b) X is true.
- c) Y is true.
- *d*) b) and c).
- e) a) and c).
- f) a), b), and c).
- g) None of the above conclusions can be drawn.

Exercise 11. Let P(n, m) be a property about two integers n and m. If we want to DISPROVE the claim that "There exists an integer n such that P(n, m) is true for all integers m", then which one of the following do we need to prove?

- a) If P(n, m) is true, then n and m are not integers.
- b) For every integer n, there exists an integer m such that P(n,m) is false.
- c) For every integer n, and every integer m, the property P(n,m) is false.
- d) For every integer m, there exists an integer n such that P(n,m) is false.
- e) There exists an integer n such that P(n, m) is false for all integers m.
- f) There exists integers n, m such that P(n, m) is false.
- g) There exists an integer m such that P(n,m) is false for all integers n.
