

RECURSION AND COMPLEXITY

YIANNIS N. MOSCHOVAKIS

ynm@math.ucla.edu

Version 1.1, first draft, October 21, 2010

CONTENTS

INTRODUCTION	iii
CHAPTER 1. PRELIMINARIES AND NOTATION	1
1A. Basic facts and examples	1
1A.1. Continuous functionals and the Fixed Point Lemma	3
1A.2. The Euclidean algorithm	5
1A.3. The binary (Stein) algorithm	6
1B. (Partial) algebras	9
1B.1. Subalgebras, generated subalgebras and embeddings	10
1B.2. Conditionals	13
1B.3. Terms with parameters	13
1B.4. Semantics	14
CHAPTER 2. RECURSIVE (MCCARTHY) PROGRAMS	17
2A. Basic definitions	17
2A.1. Syntax	17
2A.2. Semantics	19
2A.3. $\mathbf{A}$ -recursive functions	20
2A.4. Tail recursion	20
2A.5. Simple fixed points	21
2B. Deterministic computation models	24
2B.1. Iterators	24
2B.2. Recursive machines	27
2B.3. Simulating Turing machines with $\mathbf{N}_b$ -programs	30
2C. Finite non-determinism	34
CHAPTER 3. COMPLEXITY MEASURES ON RECURSIVE PROGRAMS ..	39
3A. The basic complexity measures	39
3A.1. The tree-depth complexity $D(M)$	39
3A.2. The number-of-calls complexity $C^s(M)$	42
3A.3. The depth-of-calls complexity measure $C^p(M)$	43
3A.4. The sequential logical complexity $L^s(M)$	43
3A.5. The parallel logical complexity $L^p(M)$	44

3B. Complexity inequalities	45
3C. Syntactic complexities of explicit terms.....	52
3D. Recursive vs. explicit definability	53
CHAPTER 4. ABSTRACT ELEMENTARY ALGORITHMS.....	59
4A. Axioms for elementary algorithms	59
4B. Complexity measures for abstract algorithms	64
4C. Abstract complexity measures for functions.....	67
4D. Absolute lower bounds and the embedding test	69
CHAPTER 5. LOWER BOUNDS FROM PIECEWISE LINEAR PRIMITIVES	71
5A. Representing the numbers in $G_m(\mathbf{N}_0, \vec{a})$	71
5B. Primality from $\mathbf{Lin}_0$	75
5C. Good examples: perfect square, square-free, etc.....	77
5D. Stein's algorithm is weakly optimal from $\mathbf{Lin}_0$	78
CHAPTER 6. LOWER BOUNDS FROM DIVISION WITH REMAINDER...	81
6A. Unary relations from $\mathbf{Lin}_0[\div]$	81
6B. Three results from number theory	86
6B.1. Pell pairs	87
6B.2. Good approximations of irrationals.....	88
6B.3. Louville's Theorem.....	89
6B.4. Difficult pairs	90
6C. The complexity of coprimeness from $\mathbf{Lin}_0[\div]$	93
CHAPTER 7. LOWER BOUNDS FROM DIVISION AND MULTIPLICATION	99
7A. Polynomials and their heights	99
7B. Unary relations from $\mathbf{Lin}_0[\div, \cdot]$	104
CHAPTER 8. NON-UNIFORM COMPLEXITY	111
8A. Bit-complexity and hardness	111
8B. The lookup algorithm	112
8C. Non-uniform lower bounds from $\mathbf{Lin}_0$	114
8D. Non-uniform lower bounds from $\mathbf{Lin}_0[\div]$	115
